

# MANUFACTURING MADE **SIMPLE!**

## Real-World Manufacturing Software

SimpleManufacturing™ takes the complexity out of manufacturing. Our fully-integrated, simple, efficient and affordable approach to manufacturing. We help organizations increase profit, reduce costs, mitigate risk, improve operational efficiencies, and boost customer satisfaction.

### About Us

Founded in 2001, Database Providers, the creator of SimpleManufacturing™ ERP software, has a track record of delivering superior software solutions, for the aerospace, electronics, and manufacturing industries, backed by the highest level of customer service.

After 20 years of working with numerous ERP software, at various small to mid-sized manufacturing companies, in the aerospace, automotive, electronics and semiconductor industries, it was decided to create SimpleManufacturing™ ERP software that;

- Adapts to the current business's flows, processes, practices, and policies, instead of changing the internal processes of the business to the requirements of the ERP software,
- Allow for Customers to make customizations, by offering the software as open-source,
- Offers a One-Time purchase, eliminating the Yearly Support Contracts and User-Based Pricing,
- Offers a flexible-use environment so that software is fully functional for smaller companies with minimum staff, while also meeting the requirements of larger companies with tougher global requirements.

Our Customer base is global. Our products are being used in 4 continents, 43 countries and 27 States, along with our support and additional services.

### Why Us

Lets face reality – most ERP software on the market was developed by Accountants with the Manufacturing portion the after-thought. SimpleManufacturing™ was designed by real-world manufacturing personnel at all levels and within all disciplines — not just accountants. SimpleManufacturing™ continues its advancement based around the changing global environments, requirements and the demands of manufacturing. Its features and functionality are constantly evolving based on feedback from our customer base and from within all levels of responsibilities — executives, accountants, engineers, operation managers, quality assurance managers, document control personnel, assemblers, direct labor and the like.
